

## 1.8V, 11 Output Clock Multiplier, Distributor, Jitter Cleaner, and Buffer

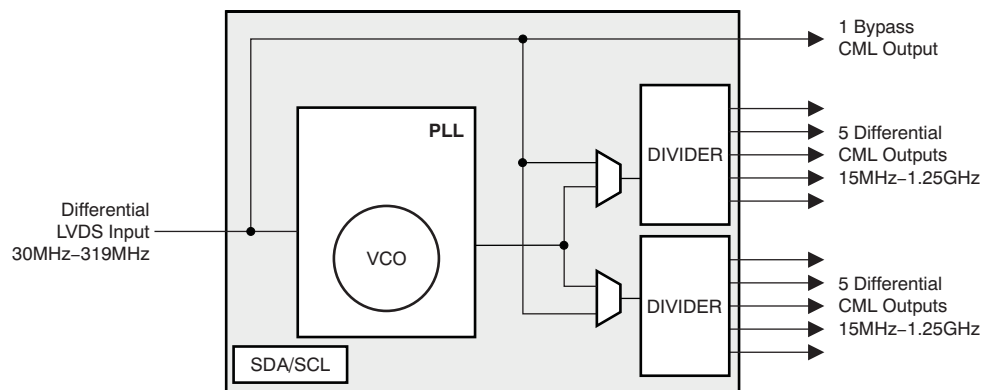

### FEATURES

- Single 1.8V Supply
- High-Performance Clock Multiplier, Distributor, Jitter Cleaner, and Buffer With 11 Outputs
- Low Output Jitter: 400fs RMS
- Output Group Phase Adjustment
- **Low-Voltage Differential Signaling (LVDS) Input**, 100Ω Differential On-Chip Termination, 30MHz to 319MHz Frequency Range
- **Differential Current Mode Logic (CML) Outputs**, 50Ω Single-Ended On-Chip Termination, 15MHz to 1.25GHz Frequency Range
- One Dedicated Differential CML Output, Straight PLL and Frequency Divider Bypass
- Two Groups of Five Outputs Each with Independent Frequency Division Ratios; Optional PLL Bypass
- Fully Integrated Voltage Controlled Oscillator (VCO); Supports Wide Output Frequency Range
- Output Frequency Derived From VCO Frequency with Divide Ratios of 1, 2, 4, 5, 8, 10, 16, 20, 32, 40, and 80
- Meets OBSAI RP1 v1.0 Standard and CPRI v2.0 Requirements

- Meets ANSI TIA/EIA-644-A-2001 LVDS Standard Requirements
- Integrated LC Oscillator Allows External Bandwidth Adjustment
- PLL Lock Indication
- Power Consumption: 640mW Typical
- Output Enable Control for Each Output
- **SDA/SCL Device Management Interface**
- 48-pin QFN (RGZ) Package
- Industrial Temperature Range: –40°C to +85°C

### APPLICATIONS

- Low Jitter Clocking for High-Speed SERDES
- Jitter Cleaning of SERDES Reference Clocks for 1G/10G Ethernet, 1X/2X/4X/10X Fibre Channel, PCI Express, Serial ATA, SONET, CPRI, OBSAI, etc.
- Up to 1-to-11 Clock Buffering and Fan-out

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## DESCRIPTION

The CDCL6010 is a high-performance, low phase noise clock multiplier, distributor, jitter cleaner, and low skew buffer. It effectively cleans a noisy system clock with a fully-integrated low noise Voltage Controlled Oscillator (VCO) that operates in the 1.2GHz–1.275GHz range. (Note that the LC oscillator oscillates in the 2.4GHz–2.55GHz range. The frequency is predivided by 2 before the post-dividers P0 and P1.)

The output frequency ( $F_{OUT}$ ) is synchronized to the frequency of the input clock ( $F_{IN}$ ). The programmable pre-dividers, M and N, and the post-dividers, P0 and P1, give a high flexibility to the ratio of the output frequency to the input frequency:

$$F_{OUT} = F_{IN} \times N / (M \times P)$$

Where:

$$P (P0, P1) = 1, 2, 4, 5, 8, 10, 16, 20, 32, 40, 80$$

$$M = 1, 2, 4, 8$$

$$N = 32, 40$$

provided that:

$$30\text{MHz} < (F_{IN} / M) < 40\text{MHz}$$

$$1200\text{MHz} < (F_{OUT} \times P) < 1275\text{MHz}$$

The PLL loop bandwidth is user-selectable by external filter components or by using the internal loop filter. The PLL loop bandwidth and damping factor can be adjusted to meet different system requirements.

The CDCL6010 supports one differential LVDS clock input and a total of 11 differential CML outputs. One output is a straight bypass with no support for jitter cleaning or clock multiplication. The remaining 10 outputs are available in two groups of five outputs each with independent frequency division ratios. Those 10 outputs can be optionally setup to bypass the PLL when no jitter cleaning is needed. The CML outputs are compatible with LVDS receivers if ac-coupled.

With careful observation of the input voltage swing and common-mode voltage limits, the CDCL6010 can support a single-ended clock input as outlined in [the Pin Description Table](#).

The CDCL6010 can operate as a multi-output clock buffer in a PLL bypass mode.

All device settings are programmable through the SDA/SCL, serial two-wire interface.

The phase of one output group relative to the other can be adjusted through the SDA/SCL interface. For post-divide ratios (P0, P1) that are multiples of 5, the total number of phase adjustment steps ( $n$ ) equals the divide-ratio divided by 5. For post-divide ratios (P0, P1) that are not multiples of 5, the total number of steps ( $n$ ) is the same as the post-divide ratio. The phase adjustment step ( $\Delta\Phi$ ) in time units is given as:

$$\Delta\Phi = 1 / (n \times F_{OUT})$$

where  $F_{OUT}$  is the respective output frequency.

The device operates in a 1.8V supply environment and is characterized for operation from –40°C to +85°C.

The CDCL6010 is available in a 48-pin QFN (RGZ) package.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### AVAILABLE OPTIONS<sup>(1)</sup>

T <sub>A</sub>	PACKAGED DEVICES	FEATURES
–40°C to +85°C	CDCL6010RGZT	48-pin QFN (RGZ) Package, small tape and reel
–40°C to +85°C	CDCL6010RGZR	48-pin QFN (RGZ) Package, tape and reel

(1) For the most current specifications and package information, see the Package Option Addendum located at the end of this data sheet or refer to our web site at [www.ti.com](http://www.ti.com).

### ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted).<sup>(1)</sup>

	VALUE	UNIT
V <sub>DD</sub> , AV <sub>DD</sub> Supply voltage <sup>(2)</sup>	–0.3 to 2.5	V
V <sub>LVDS</sub> Voltage range at LVDS input pins <sup>(2)</sup>	–0.3 to 4.0	V
V <sub>I</sub> Voltage range at all non-LVDS input pins <sup>(2)</sup>	–0.3 to 3.0	V
ESD Electrostatic discharge (HBM)	2	kV
T <sub>J</sub> Junction temperature	+125	°C
T <sub>STG</sub> Storage temperature range	–65 to +150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating condition* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values are with respect to network ground terminal.

### RECOMMENDED OPERATING CONDITIONS

Over operating free-air temperature range (unless otherwise noted).

	MIN	NOM	MAX	UNIT
V <sub>DD</sub> Digital supply voltage	1.7	1.8	1.9	V
AV <sub>DD</sub> Analog supply voltage	1.7	1.8	1.9	V
T <sub>A</sub> Ambient temperature (no airflow, no heatsink)	–40		+85	°C
T <sub>J</sub> Junction temperature			+105	°C
θ <sub>JA</sub> Junction-to-ambient thermal resistance <sup>(1)</sup> :				°C/W
airflow = 0 lfm		28.3		
airflow = 50 lfm		22.4		

(1) No heatsink; power uniformly distributed; 36 ground vias (6 x 6 array) tied to the thermal exposed pad; 4-layer high-K board.

## DC ELECTRICAL CHARACTERISTICS

Over recommended operating conditions (unless otherwise noted).

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{VDD}$	Total current from digital 1.8V supply		270		mA
$I_{AVDD}$	Total current from analog 1.8V supply		85		mA

t <sub>su</sub> (STOP) STOP setup time	0.6			μs
t <sub>BUS</sub> Bus free time	1.3			μs

(1) See [Figure 4](#) for the timing behavior.

**DEVICE INFORMATION****48-PIN QFN (RGZ)  
(TOP VIEW)**

The CDCL6010 is available in a 48-pin QFN (RGZ) package with a pin pitch of 0,5mm. The exposed thermal pad serves both thermal and electrical grounding purposes.

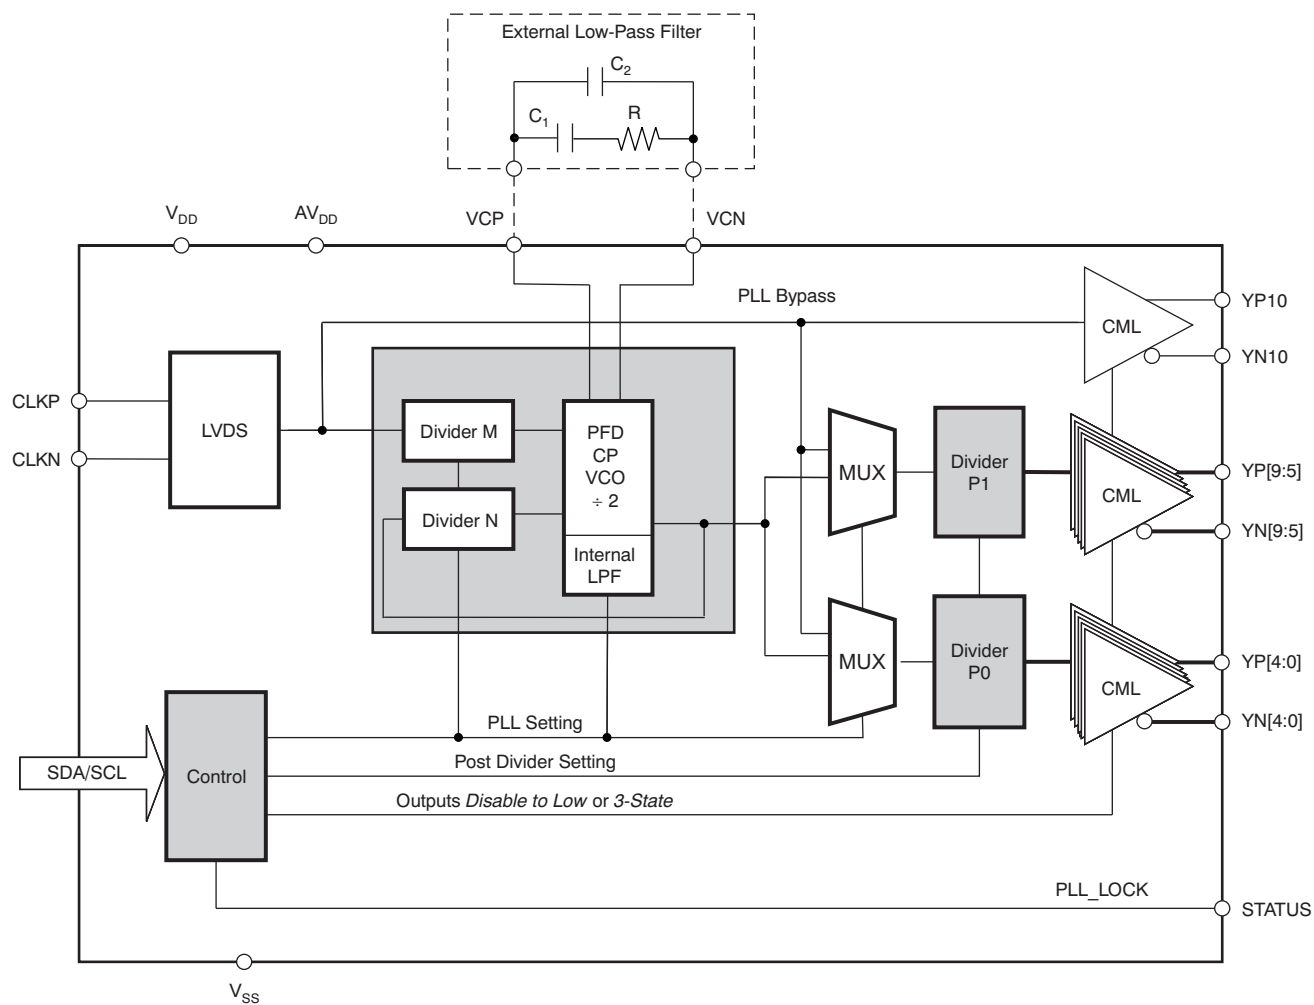

**NOTE:**

The device must be soldered to ground ( $V_{SS}$ ) using as many ground vias as possible. The device performance will be severely impacted if the exposed thermal pad is not grounded appropriately.

## DEVICE INFORMATION (continued)

### TERMINAL FUNCTIONS

TERMINAL		TYPE	DESCRIPTION
NAME	PIN NO.		
V <sub>DD</sub>	8, 11, 14, 17, 20, 23, 26, 29, 32, 35, 38, 41	Power	1.8V digital power supply.
AV <sub>DD</sub>	2, 5, 44, 47	Power	1.8V analog power supply.
V <sub>SS</sub>	Exposed thermal pad and pin 12	Power	Ground reference.
VCP, VCN	1, 48	I	External loop filter terminals.
CLKP, CLKN	3, 4	I	Differential LVDS input. Single-ended 1.8V input can be dc-coupled to pin 3 with pin 4 either tied to pin 3 (recommended) or left open.
YP0, YN0 YP1, YN1 YP2, YN2 YP3, YN3 YP4, YN4 YP5, YN5 YP6, YN6 YP7, YN7 YP8, YN8 YP9, YN9	6, 7 9, 10 15, 16 18, 19 21, 22 27, 28 30, 31 33, 34 40, 39 43, 42	O	10 differential CML outputs with support for jitter cleaning and clock multiplication. Support optional PLL bypass mode when jitter cleaning is not needed.
YP10, YN10	46, 45	O	Differential CML output. Straight bypass with no jitter cleaning and no clock multiplication.
SCL	24	I	SDA/SCL serial clock pin. Open drain. Always connect to a pull-up resistor.
SDA	25	I/O	SDA/SCL bidirectional serial data pin. Open drain. Always connect to a pull-up resistor.
STATUS	13	O	LVCMOS status signaling. High status indicates PLL lock.
ADD1, ADD0	37, 36	I	Configurable least significant bits (ADD[1:0]) of the SDA/SCL device address. The fixed most significant bits (ADD[6:2]) of the 7-bit device address are 11010.

**FUNCTIONAL BLOCK DIAGRAM**

## TYPICAL CHARACTERISTICS

Typical operating conditions are at  $V_{DD} = 1.8V$  and  $T_A = +25^\circ C$ ,  $V_{D,IN} = 200mV_{PP}$  (unless otherwise noted).

Figure 1.

Figure 2.

Figure 3.

## SDA/SCL INTERFACE

This section describes the SDA/SCL interface of the CDCL6010 device. The CDCL6010 operates as a slave device of the industry standard 2-pin SDA/SCL bus. It operates in the fast-mode at a bit-rate of up to 400kbit/s and supports 7-bit addressing compatible with the popular two-pin serial interface standard.

### SDA/SCL Bus Slave Device Address

A6	A5	A4	A3	A2	A1	A0	R/W
1	1	0	1	0	ADD1	ADD0	0/1

The device address is made up of the fixed internal address, **11010 (A6:A2)**, and configurable external pins ADD1 (A1) and ADD0 (A0). Four different devices with addresses 1101000, 1101001, 1101010 and 1101011, can be addressed via the same SDA/SCL bus interface. The least significant bit of the address byte designates a write or read operation.

R/W Bit:

0 = Write to CDCL6010 device

1 = Read from CDCL6010 device

### Command Code Definition

CDCL6010RGZTG4	ACTIVE	QFN	RGZ	48	250	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-3-260C-168 HR

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## RGZ (S-PQFP-N48)

## PLASTIC QUAD FLATPACK

4204101/E 11/04

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Quad Flatpack, No-leads (QFN) package configuration.
  -  D. The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.
  - E. Falls within JEDEC MO-220.

## THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to a ground or power plane (whichever is applicable), or alternatively, a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, Quad Flatpack No-Lead Logic Packages, Texas Instruments Literature No. SCBA017. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

NOTE: All linear dimensions are in millimeters

Exposed Thermal Pad Dimensions

# RGZ (S-PQFP-N48)

4207624-3/A 01/06

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SCBA017, SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
